## **BEST AVAILABLE IMAGES**

Defective images within this document are accurate representations of the original documents submitted by the applicant.

Defects in the images may include (but are not limited to):

- BLACK BORDERS
- TEXT CUT OFF AT TOP, BOTTOM OR SIDES
- FADED TEXT
- ILLEGIBLE TEXT
- SKEWED/SLANTED IMAGES
- COLORED PHOTOS
- BLACK OR VERY BLACK AND WHITE DARK PHOTOS
- GRAY SCALE DOCUMENTS

**IMAGES ARE BEST AVAILABLE COPY.**

**As rescanning documents *will not* correct images,  
please do not report the images to the  
Image Problem Mailbox.**

**AMENDMENTS TO THE CLAIMS**

**This listing of claims will replace all prior versions and listings of claims in the application:**

**LISTING OF CLAIMS:**

1. (currently amended): An adhesive label comprising a circuit substrate, electronic components formed on at least one surface of said circuit substrate, and an adhesive layer on said electronic components, wherein said electronic components are sequentially laminated and said adhesive layer ~~being to be applied~~ is suitable for application to an article.

2. (original): The adhesive label according to claim 1, wherein said adhesive layer is a pressure sensitive adhesive layer.

3. (cancelled).

4. (previously presented): The adhesive label according to claim 1 or 2, wherein an entire data carrier element for a contactless data carrier system containing said electronic components is formed on one side of said circuit substrate, and said adhesive layer is formed on said entire data carrier element.

5. (previously presented): The adhesive label according to claim 1 or 2, wherein a surface layer is provided on a circuit substrate surface that is on the reverse side to a surface carrying said electronic element.

6. (previously presented): The adhesive label according to claim 1, wherein said electronic components are separately formed on each surface of said circuit substrate and connected to each other by a through-hole to integrate both electronic components to form an entire data carrier element for a contactless data carrier system, said adhesive layer is formed on one of said separately formed electronic components, and said surface layer is formed on the other of said separately formed electronic components.

7. (previously presented): The adhesive label according to claim 4, wherein a surface layer is provided on a circuit substrate surface that is on the reverse side to a surface carrying said electronic element.
